

Introducing...

PHOENIX

Ultra HIGH EFFICIENCY • GAS FIRED WATER HEATER

- **Low energy costs** - resulting from an ultra high 96% Thermal Efficiency rating
- **High system efficiency even during low load conditions** - the modulating burner operates at a 3 to 1 turndown ratio, matching fuel consumption to demand
- **Improved component life and reliability** - modulation, along with thermal mass, eliminates the short cycling effect, which conserves energy and improves component reliability
- **Appropriate for both residential and commercial applications** - available in three gallon sizes (ranging from 55 to 119 gallons) and three BTU inputs (ranging from 100,000 to 199,000 BTUs)
- **Low standby losses** - the tank loses only ½ degree Fahrenheit per hour when the burner is off, thanks to 2" of environmentally safe foam insulation
- **Virtually maintenance free operation** - the robust material and sophisticated design of the heat exchanger minimize lime and scale buildup, eliminating blockage risks
- **Incredible system flexibility** - built-in auxiliary taps provide connections to air handlers, radiant heating, or supplemental storage tanks
- **Optimum serviceability** - a removable front cover provides service technicians easy access to components
- **Quality construction** - an extremely durable cupronickel and stainless steel heat exchanger boasts excellent heat transfer properties and resists corrosion, while the robust 316L stainless steel tank eliminates the need for anode rods
- **Excellent venting options** - uses inexpensive, easy-to-install PVC or CPVC pipe, with vent lines up to 85 feet total equivalent length
- **Self-diagnostic electronic control** - displays digital readouts for water temperature, set point and differential
- **Eligible for tax credits and utility company rebates** - based on high efficiency ratings

MCCALL'S SUPPLY, INC

"THE HEATING & COOLING PROFESSIONALS"

Serving 3 States, From 19 Locations For Over 40 Years
